

## TANKCLEAN ALKALINE

ADVANCED WATER-BASED TANK CLEANING COMPOUND

### FEATURES & BENEFITS:

- Water-based alkaline cleaner
- Safe to use on epoxy coatings and most metals
- Non-toxic
- Biodegradable
- Can be used as deodorising wash
- Extremely good at removing saponifying animal fats, edible oils and waxes
- Promotes a healthy environment due to the splitting of the wastewater
- Easy to use and cost-effective
- Can be used for hydrocarbon freeing
- Removal of soot deposits from inert gas systems
- Can be used in immersion baths

### PRODUCT DESCRIPTION:

TANKCLEAN ALKALINE is a non-caustic heavy-duty alkaline cleaner formulated for cleaning animal and edible oils from tanks with special coatings. It is specifically designed to improve cleaning efficiency while overcoming the limitations imposed by caustic-based cleaning compounds. TANKCLEAN ALKALINE can also be used as a deodorising wash in all applications.

### DIRECTIONS FOR USE:

TANKCLEAN ALKALINE is recommended for cleaning tanks for edible cargoes to a degree of cleanliness where no contaminants are to be tolerated in the next cargo. Recirculate or inject TANKCLEAN ALKALINE at 5% strength in fresh/demineralised water after the tanks have been stripped and rinsed. Modified procedures are required with drying oils.

TANKCLEAN ALKALINE can also be applied undiluted in spray applications followed by a rinse.

### STANDARD PACKING:

TANKCLEAN ALKALINE is usually available in plastic cans of 25 L and plastic drums of 200 L.
